Colleagues,

As you see from this months article, we are proud to announce a major new cars+iR development.

Now with cars+iR, mobile vehicle management is no longer just the domain of large companies at busy airport locations using expensive bulky equipment but can be used by any operator anywhere! Close an RA, carry out a vehicle stock check and much more, all from an IOS device.

Interface **now** to:

The brand new Photos app built into cars+iR is out now!

Damage recording on vehicle return processing now generates Damage Entry ticket for completion at the counter and allows for photos of vehicle condition.

Now, when processing a vehicle, whether it is on return from an RA or for any other purpose such as updating vehicle status, the user is presented with a button to invoke the Photos function. In this mode cars+iR is aware of the vehicle and associated RA so will display the most recent vehicle photos. The user can select the most recent photo or go back and look at previous photos, each flagged with The date and time they were taken and any description that has been entered.

The user is also presented with the option to "Add Photo", making use of the IPad, IPhone or IPod Touch camera. The app automatically tags the photo with the vehicle and/or the RA number (as appropriate) but the user has access to both of those references and can amend if needed. The user also adds a brief description of the image to illustrate why it's been taken or what it represents before uploading it, so that information is available to others reviewing the photos at a later stage. In this way, the user could take a all views of a vehicle and upload them for study and review after an accident, for example.

The cars+iR Photos app can also be accessed from the top level menu of cars+iR so that it can be used for taking any photograph of anything without any specific context.

All photos are stored in the Cloud using Amazon's highly acclaimed S3 storage facility which is priced at extremely reasonable levels and has a superb reputation for reliability and speed. In this way, we have no need to impose any limitation on the amount of storage our clients may want to maintain and the client is in full control of the Amazon costs and storage policies. These photos are available 24x7 from anywhere in the world but accessible only through Thermeon applications with full authentication protections to ensure privacy.

The cars+iR Photos app will also create a new Damage entry line item and provide the Rental Counter staff clear information on the damage to progress with the customer. This feature adds to the many functions already in cars+iR.

***Click here** to view cars+iR in the app store. Talk to your Account Manager or local support team to learn more. Going to be at WTM? Come to stand TT548 and ask us all about it.*
