Physical Fleet Check – cars+iR
Development team Thermeon Worldwide.

[Cars+iR](#) is the Thermeon mobile app which works on iOS devices i.e. iPhone, iPad, iPod Touch. It enables agents to carry out rental activities away from the rental desk, increasing flexibility and productivity.

Of course, knowing exactly where your vehicles are is imperative to any operation. The assist with this [Cars+iR](#) Fleetcheck which enables the lot/car park supervisors to carry out a quick check of the fleet using the Thermeon app for Apple mobile devices.

The app allows the supervisor to walk around the carpark and capture a list of all vehicles present. The vehicle license can be entered using the keypad or to reduce errors from typos and increase efficiency it can be scanned if the [cars+](#) keytag QR code is available, for example if attached to the inside of the windscreen/windshield.

To make life easier, a user doesn't have to be in range of an Internet connection when walking around collecting vehicle information. Instead the collected inventory can be uploaded later, when the user returns to Internet coverage.

Once uploaded, the captured vehicle list is compared against current rental data in cars+. This includes vehicle status, vehicle movements, etc. for the specified location. A report is then generated and emailed which highlights:

- Vehicle on-rent – it should not be in the lot.
- Vehicle on non-rev – it should not be in the lot, or non-rev movement incorrect.
- Vehicle sold – the vehicle should have been collected.
- Vehicle missing – no recorded movement, vehicle should be here.
- Vehicle in wrong location – vehicle is recorded as being at a different location.
- Vehicle not recognised – submitted license is incorrect.

A grace period can also be configured to allow for vehicles that have recently returned, or due to go out, so they are not reported as an error.

Using this report, corrections can then be made in [cars+](#), improving the integrity of your [cars+](#) data whilst providing a snapshot of your fleet at a particular date and time.

In addition to recording the presence of a vehicle, [cars+iR](#) can also capture photos of the vehicle (if an Internet connection is present) using the camera on the iOS device. These photos are uploaded and stored for later reference for use in the damage reporting process or used to highlight an issue with a vehicle.

Want to know more about the other functions in [cars+iR](#)? Talk to your Thermeon Account Manager or Support Contact.

Going to WTM?

2 - 5 November 2015 • London
Visit us in Travel Technology, stand TT406

[Apple App Store](#)

Colleagues,

Now I know it might seem a long way off, but its probably time to start thinking about if you are heading to London's WTM in the first week of November.

With London hosting the Rugby World Cup Final a few days before, this year organisers are expecting a record number of people through the doors.

So is it time to book those flights?

Terry
